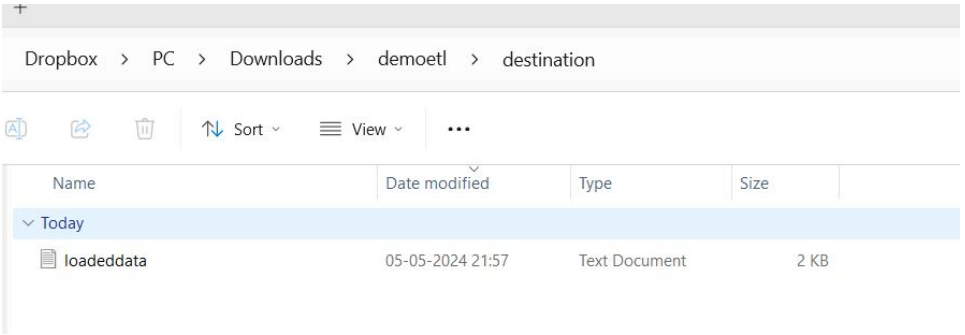
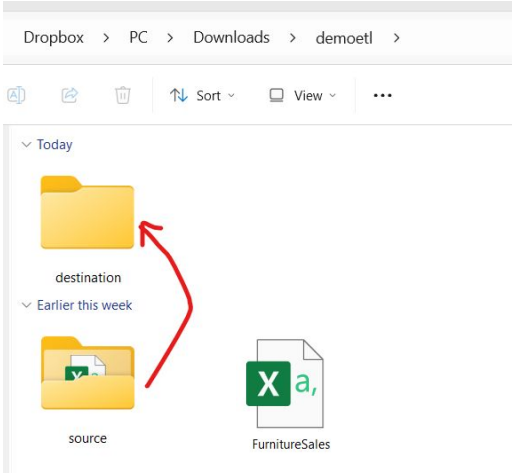
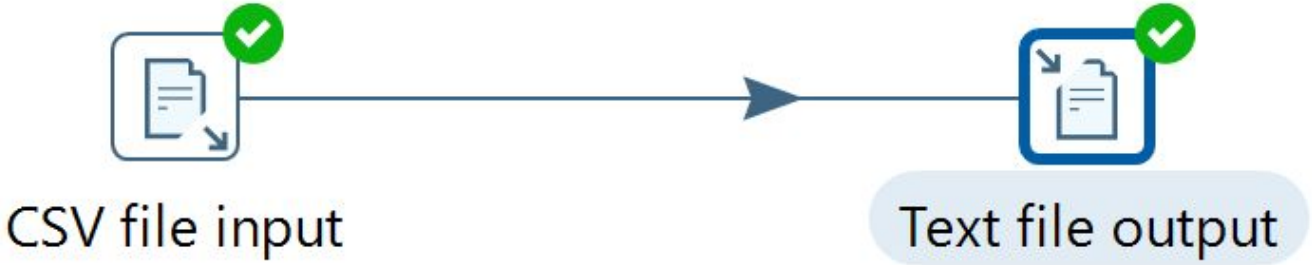
A Hitachi Group Company

Task 1

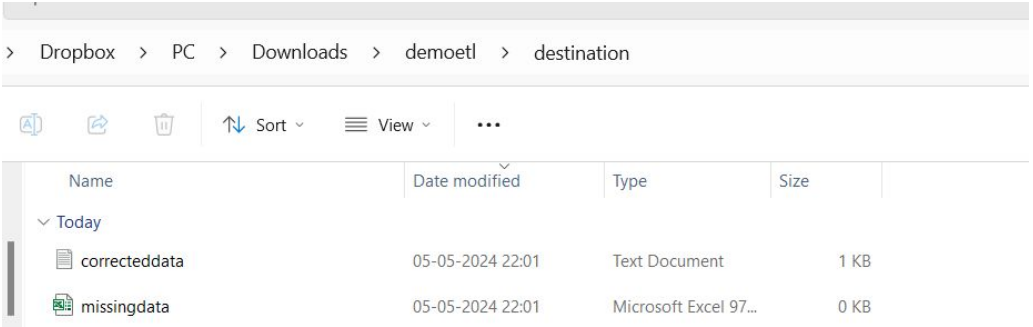


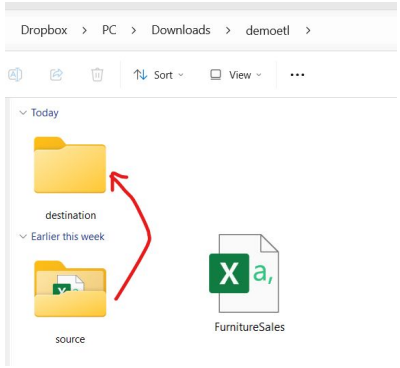


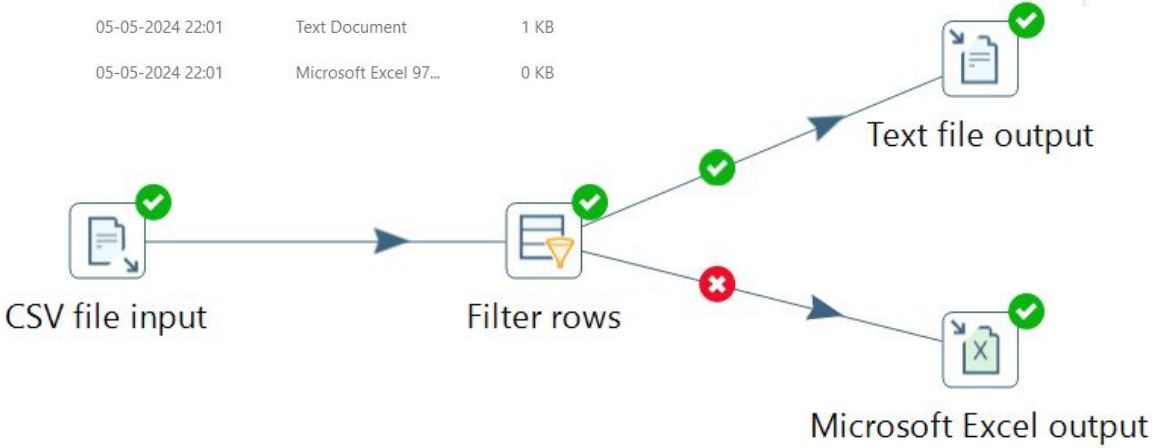


Transformation 1

Task 2







Transformation 2

- A Job is a higher-level orchestration structure that coordinates the execution of one or more transformations and other tasks.

- A Transformation is a lower-level data processing unit responsible for manipulating and processing data.

Aspect	Job	Transformation
Purpose	Workflow management	ETL data processing
Granularity	High-level orchestration	Step-level data manipulation
Components	Job Entries	Steps
Execution Unit	Jobs contain transformations or other jobs	Individual steps within the transformation
Control Flow	Conditional execution (success/failure, etc.)	Linear or parallel data flow
Error Handling	Built-in error handling and notification	Individual step-level logging
Reusability	Can include reusable transformations	Can be reused in jobs
Execution Logic	Executes based on job entries' logic and dependencies	Executes steps in defined sequence

App passwords

App passwords help you sign into your Google Account on older apps and services that don't support modern security standards.

App passwords are less secure than using up-to-date apps and services that use modern security standards. Before you create an app password, you should check to see if your app needs this in order to sign in.
